Excerpt: Overpopulation is a condition where an organism's numbers exceed the carrying capacity of its habitat. The term often refers to the relationship between the human population and its environment, the Earth. Steve Jones, head of the biology department at University College London, has said, 'Humans are 10,000 times more common than we should be, according to the rules of the animal kingdom, and we have agriculture to thank for that. Without farming, the world population would probably have reached half a million by now!' The world's population has significantly increased in the last 50 years, mainly due to medical advancements and substantial increases in agricultural productivity. The recent rapid increase in human population over the past two centuries has raised concerns that humans are...
