The work divides itself naturally into three parts, the first of which considers the laws of motion<sup>1</sup> in general and those methods which are applicable to systems of all sorts. The separate chapters of this part include Kinematics of a Point, Laws of Motion, General Principles (such as that of Virtual Work), Work and Energy, Principle of Least Action, LaGranges Equations, Oscillations and Cyclic Motions. The second part is devoted to the Dynamics of Rigid Bodies, and is divided into two chapters, one dealing with Systems of Vectors, Moments of Inertia, Centrifugal Forces, etc. ; the other, with the Dynamics of Rotating Bodies. The third part divides itself from the other two from the fact that in it the differential equations are partial, and in the others they are ordinary. As a preparation for this subject there is a full discussion of the theory of the potential function, which introduces the most important mathematical theorems and prepares for the subsequent chapters. Next follows the Dynamics of Stress and Strain, the Statics of Fluids, the...
